Profile:

AI visual designer building generative moving-image pipelines for narrative products. Currently lead AI visual designer on a speculative future-world universe (Year 2225) for an unreleased app — roughly 15 short-form episodes a month, holding character identity, architecture and object continuity across shots and camera movement. From September 2026, MA in Applied AI for Arts and Design at Elisava, Barcelona. Ten years in film and broadcast before that: directing, cinematography, editing. Also an artist and curator — guest tutor at Sandberg Instituut Amsterdam (A for Facts MA), art director at Schrocher Gallery, founder of Capsule, a time-locked digital storage platform.

AI & Generative Work:

2026 – Present// Lead AI Visual Designer, undisclosed startup (deployment Q4 2026). Building a speculative future-world (Year 2225) for an upcoming app and transmedia social-media universe. ~15 short-form episodes per month. Detailed character continuity, architectural and object design consistency through camera movement; prompt-based start-frame generation and animation. Iteration cost reduced from ~30 generations per approved shot to ~8. Engines: Higgsfield (Soul 2.0, Soul Cinema, Cinema Studio), Flux, Nano Banana Pro, Kling, Sora.

2024// Generative video integrated with shot footage — “Own nothing but a body, become nothing but a body”, performance work with choreographer Natia Chikvaidze. Multilayered editing, experimental sound through Ableton VSTs and external effects.

2024 – Present// Capsule — time-locked digital storage platform, in development. Files sealed until a specified future date under tiered security protocols. Examines temporal ethics in digital archives.
